

# Diamond DA20

Now with Garmin Glass Cockpit!

- Garmin PFD/MFD glass cockpit
- Redesigned panel for more space and comfort
- 125 hp TCM IO-240 with Sensenich fixed pitch propeller
- Outstanding performance
- 5 gph in typical flight training operations
- 450 lb full fuel useful load
- Utility category certification to max gross weight
- Spin Certified for instructor training – and peace of mind
- Proven high resale value
- Several million hours of demonstrated reliability on the toughest flight lines around the world

If you've wanted to go glass, but simply couldn't justify the expense of a new four-seater to do it, the DA20 is for you.

With Garmin's revolutionary G500 glass cockpit, the Diamond DA20 takes pilots from first flight through advanced flight for less money than any certified airplane on the market today. Its performance, style and equipment are customer magnets, with the new glass flight deck giving your students a competitive edge for the next steps in their flying career. With the lowest acquisition and operating cost in the industry, demonstrated reliability, proven durability and a safety record second to none, the DA20 is a smart investment in your future. It's also why well over a thousand DA20's have been sold and why the US Air Force screens all their pilot cadets in them.

All Diamond Aircraft models are now available with Garmin's industry leading glass cockpits, giving you cockpit commonality across our entire fleet. Two-seat single, four-seat single, twin and even jet, as well as model specific Diamond Simulation Flight Training Devices to match. No other company is as dedicated to delivering the business tools for your flight training operation's success.

## Affordable, Powerful, Certified, Garmin Glass Cockpit

The G500 option on the DA20 offers the power and potential of a Garmin integrated glass cockpit at a lower price than ever before.

The G500 combines a high-resolution primary flight display (PFD) and multi-function display (MFD) in one 10-inch wide bezel to bring the basic training cockpit into the 21st century, while making each flight even safer and more enjoyable.

Coupled with Garmin's WAAS certified GNS 430, optional 2nd COM, transponder and audio panel, the G500 offers a professional panel that exceeds expectations without overwhelming a student pilot.

We haven't forgotten the instructor either. With great viewing angles, centrally located radio stack and standby instruments, as well as convenient access to all controls, switches and circuit

breakers from either seat, the DA20 is the ideal environment for instructing.

Options such as Garmin's Synthetic Vision Technology, active traffic advisory system interface and more, are also available for your DA20 with the G500 – all with the familiar, intuitive menu and softkey experience that's made Garmin synonymous with glass cockpit and the avionics leader in today's general aviation.

It's a WIN – WIN with the DA20: unbeatable economics, safety and innovation, coupled with Garmin's glass cockpit technology.

Can't afford to go glass? How can you afford not to?

For a demonstration flight, contact your local Diamond Regional Distribution Center or call 1-888-359-3220.
